DETAILED ACTION

1. The abstract of the disclosure is objected to because "and/of" is unclear.

Correction is required. See MPEP § 608.01(b).

2. Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1 on line 9 the meaning of "and/of" is unclear, was "and/or" meant? In claim 2 on line 4 it is assumed that Applicant does not intend to invoke 35 USC 112, sixth paragraph. Respectfully suggest deleting "means of" in claim 2 on line 4. Similarly in claim 3 on line 3 "means of" should be deleted. In claim 7 it is confusing whether "(or flat steel)" is being positively recited. Please delete the parentheses or the entire expression to obviate this rejection.

3. Claim 1 recites a method of manufacturing components with an intended use that the components be used in a weaving machine since the phrase "weaving machine" is only in the preamble. In claim 6 on line 5 the parenthetical expression "for instance, a stepped shape" has been given no patentable weight

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Wagner et al. in U.S. Patent No. 5,809,647. Wagner et al. discloses laser welding two components of stainless steel and copper that have different sizes and different

mechanical and magnetic properties that as a component is capable of being used in a weaving machine.

6. Claims 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Bowen et al. in U.S. Patent No. 4,404,995. Bowen et al. discloses welding extruded aluminum slats (see column 3, lines 17-18) to studs (made of stainless steel to resist corrosion; see column 3, line 48) to form part of a component.

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bowen et al. in U.S. Patent No. 4,404,995. The size of the component in Bowne et al. is considered a matter of design choice depending upon the other components in the weaving machine.

9. Claims 2 and 5-7 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Koch in U.S. Patent No. 4,901,767 has sections of sheet metal of differing sizes laser welded together.
